

Hello, it's Shriya!

As a data scientist, my goal is to decipher the
real story behind the numbers and make it
accessible for all

Scroll

ABOUT ME

My discovery of data science occurred in college at Rutgers University where I obtained a bachelors in Computer Science with a double minor in Statistics and Data Science. The course work as well as my research in topic-analysis on long covid symptoms over time under Dr. Amari led me to pursue a masters in the field.

As of March 2025, I am on track to complete my masters in Data Science and Analytics at Georgetown University this spring and excited for what is to come next!

PROJECT TIMELINE

*a timeline of projects during my masters
program*

*A data analysis on long covid and what
demographics are most affected as well
as its current perception in media and
news coverage*

 Long Covid Analysis 

Course

Intro to Data Science

 KPOP on the Western Music
Industry 

Course

Time Series

*A time series study on KPOP in the
western music market, answering
questions on its current popularity as
well as longevity*

Using data analytics and statistical modeling, we uncovered what aspects of a movie contribute to its overall success

 Unlocking Movie Magic:
Predicting Film Success

Course
Statistical Learning and Analysis

 Moving and Parking Violations
in D.C.

Course
Data Visualization

An interactive data visualization newsletter for D.C. drivers on moving and parking data

Using big data in the form of subreddit information and cloud computing, we analyzed how diet culture is spread online and the reasons why people seek such communities

 Diet Culture Reddit Analysis

Course
Big Data and Cloud Computing

 Autonomous Lunar
Rover Simulation

Course
Reinforcement Learning

*Using reinforcement learning
techniques to simulate an autonomous
lunar rover as it learns to gather
resources in its environment*

 Information Retrieval: CrisisFACTS

Course
Machine Learning App Deployment

STAY TUNED

Stay tuned to more exciting Data Science and AI projects in the near future!
